The 7 Spots Most Cleaners Miss

And that you will notice within a week. Use this to check any cleaning, including your own.

1. **Baseboards and door frames**
   Dust builds up along the tops and corners. Run a finger along the top edge: it should come away clean.

2. **Air vents and return grilles**
   Dust settles between the slats and blows back into the room. Check them with the light from the side.

3. **Ceiling fans and light fixtures**
   Rarely reached without a ladder. Dust falls onto the freshly cleaned surfaces below.

4. **Inside the microwave and the fridge door seals**
   Splatters and crumbs hide in the rubber seals and the top shelf.

5. **Light switches, door handles and cabinet pulls**
   The most touched surfaces in the home are often only dusted, not wiped.

6. **Shower tracks, faucet bases and grout lines**
   Soap scum and limescale build up where water sits. Look at the corners and around the drain.

7. **Behind and under the edges of furniture and appliances**
   The vacuum stops at the visible floor. Check the edges of the sofa, bed and the area around the fridge.

How to use this: after your next cleaning, check all 7 spots. If 3 or more are missed, it is time to change how it is done, or who does it.
